ITEM

- 18a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) evidence of uniformity and stability; and (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified
- 18b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If the new variety is most similar to one variety or a group of related varieties:
- (1) Identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant **MAY NOT** reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See *Regulations and Rules of Practice, Section 97.103*).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.

21. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

US: March 2003

23. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

NOTES: It is the responsibility of the applicant/owner to keep the PVPO informed of any changes of address or change of ownership or assignment or owner's representative during the life of the application/certificate. There is no charge for filing a change of address. The fee for filing a change of ownership or assignment or any modification of owner's name is specified in Section 97.175 of the regulations. (See Section 101 of the Act, and Sections 97.130, 97.131, 97.175(h) of the Regulations and Rules of Practice.)

To avoid conflict with other variety names in use, the applicant must check the appropriate recognized authority. EXHIBIT A
Origin and Breeding History of 08590485 Snap Pea

08590485 was developed at Seminis's Western Breeding Station (WBS), Filer, Idaho, by pedigree selection from the first backcross of Stringless Sugar Snap, a Syngenta variety, as recurrent parent and a downy mildew resistant breeding line, F234//Bolero/MiniDM. F234 was derived from a cross of Plus and Dinos, both Seminis varieties. Bolero and Mini are both Seminis varieties. Mini DM was selected from a cross of Mini and JI 85. JI 85 is a wild pea from the John Innes collection, originally collected in Afghanistan. The crossing and selections were made as follows:

- 6-93 Planted Stringless Sugar Snap and F234//Bolero/MiniDM in the greenhouse at WBS. Crosses made
- 9-93 Planted the F1 from above and Stringless Sugar Snap in the gh at WBS. Made BC1
- 1-94 Planted BC1 in the gh at WBS. Allowed to self pollinate.
- 8-94 Planted BC1F2 in the gh at WBS. Selected downy mildew resistant plants and harvested seed from them as a bulk.
- 4-95 Planted BC1F3 in the field at WBS. Selected individual plants and confirmed resistance to downy mildew.
- 4-96 Planted BC1F4 in the field at WBS. Selected individual plants.
- 8-96 Planted BC1F5 in the gh at WBS. Advanced 1 generation on an individual plant basis.
- 4-9-97 Planted BC1F6 line in the field at WBS under the number R97 4492. Selected this line for short productive plants with sweet, low fiber, dark green pods. Observations during the growing season indicated the line was uniform and stable. All subsequent increases of 08590485 trace to the bulk of R97 4492.
- 4-13-99 Space planted a stock of 08590485 in the field at WBS. Harvested as 200 individual plant selections.
- 4-13-00 Planted 200 individual plant selections in the field at WBS as a progeny increase under the number RWL199. Observations during the growing season confirmed 08590485 is uniform and stable.

Selection criteria in the field represent a balance of characteristics related to productivity and quality and to goodness to fit for market needs such as dark green pod color, short upright plant, good yield potential, and sweet, stringless, and low fiber pods.

Observations during the two (2) years of 1997 and 2000 confirm 08590485 is uniform and stable within commercially acceptable limits. As is true with other garden pea varieties a small percentage of off-types can occur within commercially acceptable limits for almost any characteristic during the course of repeated multiplications. No variants are known to occur.

EXHIBIT B

Novelty Statement Concerning XP 08590485, Garden Pea

08590485 is a full season, normal foliage, snap pea for processing.. To our knowledge the variety most similar to 08590485 is Stringless Sugar Snap. The comparative characteristic that best distinguishes the two includes, but may not be limited to, resistance to downy mildew: 08590485 carries a dominant allele for resistance that traces to JI 85, a wild accession from the John Innes collection, whereas Stringless Sugar Snap does not carry this allele and is susceptible to downy mildew.
